

CELECT®

CELLULAR COMPOSITE SIDING

PRODUCT DIRECTORY

PRODUCT OFFERING CATALOG

Celect is inspired by the gorgeous aesthetics of wood yet possesses none of wood's far-from-perfect maintenance demands. This is the very best of both worlds—where you get the look, touch and timelessness of real wood without its inconveniences and expenses.

Forget about mold, mildew, deterioration, scrubbing and messy maintenance crews. While you're at it, forget about the painting, repainting, caulking, re-caulking and delaminating that fiber cement is famous for. Celect is all about virtually maintenance-free great looks that never quit. Year after year, decade after decade.

Celect Cellular Composite Siding

FREQUENTLY ASKED QUESTIONS

1. What is Celect siding and is it a new product?

- Celect was introduced in 2011. Celect is an innovative, low maintenance product engineered to have the curb appeal of wood, with minimal maintenance. Celect is made of cellular PVC. Cellular PVC absorbs virtually no water.
- Celect has patented interlocking joints and a gravity lock design. With Celect, you can create a virtually seamless, cohesive look without the need for caulk.

2. Is it true that the Celect siding and trim system do not require caulk?

- That is correct, unlike other sidings, the Celect siding system, both siding and trim, are designed in a way that they do not require caulk – saving significant maintenance time and cost.
- Celect is a ventilated cladding system, that allows air behind the cladding to allow moisture in the wall to dry—keeping your walls healthy.

3. Can I caulk around Celect?

- Caulking can be used for aesthetic reasons around window and door trim, but should be used in moderation, and never around expansion gaps (pockets or tops of corners), where the space is needed for the material to move with temperature changes (expansion and contraction).

4. What if I want a custom color?

- Celect Canvas is the unpainted version of our innovative Celect product that gives you the ability to select your color.
- Painting with a good quality, acrylic latex, vinyl safe paint will protect the product to maintain color consistency for many years. There are several paint manufacturers that will warranty their coating products on cellular PVC. See our Guide to Prefinish Celect Canvas. Our warranty does not cover painted finishes or coating applied to the product by the original purchaser or any third party.

5. Can I paint over the existing coating?

- Painting over the existing coating is not recommended because doing so will void the paint warranty. We offer touch up paint made from the same paint as the original coating for any nicks or scratches that you may wish to touch up.

6. Why do you offer end-coat paint?

- End coat paint is only for aesthetic reasons and is only needed if you have “end cuts” of trim exposed after installation, such as on a traditional header with butt-joints and sill trims with exposed cells.

7. Can I wash Celect Siding? Celect Trim?

- A garden hose and a clean soft cotton cloth will allow you to clean difficult spots without scratching the finish in most cases.
- Mild detergents can be used, examples include: Dawn™, and Murphy's Oil Soap™. We suggest using a standard spray bottle, followed by washing with a garden hose.
- Please see the installation handbook for additional cleaning information and maintenance.

FREQUENTLY ASKED QUESTIONS

INSTALLATION

8. What fasteners are recommended for Celect trim?

- Celect Cortex or Pro-plug screws and plugs are recommended to secure finished Celect trim pieces and create a hidden look.
- If other trim fasteners are used, they must be fasteners intended for exterior use with PVC trim, such as stainless steel or hot dipped galvanize.
- See the installation handbook for details of suitable fasteners, as well as a full list of information and instructions.
- For “padding out” trim, fasteners should be long enough to penetrate the solid wood substrate a minimum of 1-1/2".
- The Celect Installation Handbook has a full list of information and instructions.

9. Will the trim plugs have the same coating as the trim & siding?

- Yes, Celect plugs will, other plugs will not.

10. Can I use rabbeted 5/4" PVC trim boards produced by other manufacturers for trim with Celect siding?

- No, we do not recommend this. In many cases, other manufacturer’s pocketed trim and corners are not sufficiently deep for long courses of Celect siding.
- Our Celect trim products are specifically designed to work with Celect siding, providing proper pocket depths for all installations.
- Our Celect corners are tapered at the “front edge” of the pocket to avoid rubbing the paint as the siding expands and contracts.

11. Can I use other PVC trim for window surrounds and corners?

- Celect trim is specifically designed to work with the Celect siding system, and ensures that the proper pockets exist.
- Other trim may or may not work, depending on the specific product.

12. How much does the siding and trim expand and contract?

- All materials move, and so does PVC. With that in mind, we have designed the Celect siding and trim system to manage expected expansion and contraction.
- Expansion/contraction is driven by length and temperature of product. Illustration below is 100°F change in panel temperature (not air temp).
 - Siding Panels are not, and must not be, hard nailed.
 - Remember to only center pin each course of siding, not each panel.
 - 12' panel will move – 7/16" total (7/32" per end)
 - 36' run will move – 1-1/4" total (7/8" per end)
 - 60' run will move – 2" total (1" per end)
 - Trimboards are a bit different since they are hard nailed/screwed. This constrains the expansion and contraction to about 1/2 of the amount of unconstrained boards.
 - Consult the installation handbook for trim installation details and managing expansion and contraction.

Celect Cellular Composite Siding

FREQUENTLY ASKED QUESTIONS

13. What fasteners are recommended for Celect siding?

- Regular hot dipped galvanized or stainless roofing nails are recommended for most installations of Celect siding.
- Do not use staples, small brads, rink shanks, or wire nails.
- Fastening recommendations (type and spacings) can be found in our product certification and evaluation reports.

14. Can I use pressure treated furring strips?

- PVC furring strips are recommended, and available.
- Pressure treated wood is not recommended because it does not make wood water resistant, only rot resistant.

15. Why aren't there pre-furred corners available?

- Celect's two-step process allows the installer to determine the distance between the panel and furring, which allows them to work around issues while ensuring a beautiful finished look.

16. Can I install Celect siding over existing siding?

- You may be able to install Celect siding over existing siding. Any loose boards must be resecured.
- A flat surface is required for Celect siding: you may need to install furring strips (or wall leveling siding underlayment) to create a flat surface.

17. Is flashing and water resistive barrier required?

- Flashing and water resistive barriers are building code requirements. We do provide some details of their use, but always follow your local code requirements.

18. What is the definition of "center pin" when referring to a long run of siding?

- A center pin is the center of the siding course (not a panel).
- Using a center pin fixes the center of each course of siding and ensures the movement of the course will be distributed to both "pockets" of the trim.

FREQUENTLY ASKED QUESTIONS

19. Why do I need to pack-out my Window & Door trim with 3/4" Bump-outs?

- Even though most of the siding runs between windows are short, the runs that also go over or under the window are often very long—therefore a 2" pocket is required around all windows to accommodate the proper expansion and contraction of the siding
- 3/4" furring is the simplest way to create the 2" deep pocket required for the Celect panels.
- This process also allows you to put up the furring as you side the house. You can then make the window surround frames on the ground and simply screw them in once the siding is up.

20. Can I use Celect if my wall is exceptionally long, for example 70'?

- Yes, you can, by using a feature board. A feature board (also referred to as an expansion joint) should be used for siding courses longer than 60'. Please see our installation handbook for additional information.

BOUNDLESS™

Where some see boundaries, Westlake Royal Building Products™ sees opportunities to drive innovation, elevate design and deliver solutions that redefine the industry. Our comprehensive selection of products, materials and widely expressive color palettes and textures meet any home demand—inside and out, East Coast to West. Giving everyone the tools and technology to transform spaces into anything they want. This is our mission. And it's Boundless™.
